The Core Components Covered in the WebQuest Answer Sheet

The answer sheet typically aligns with a series of questions designed to explore each class of macromolecules comprehensively. Below is a detailed breakdown of the main sections and the types of questions they encompass.

1. Carbohydrates

Carbohydrates are primary energy sources and structural components in cells. Webquest questions often focus on their molecular structure, types, and functions.

Key Topics:

- Monosaccharides: Simple sugars like glucose and fructose.
- Disaccharides: Formed by two monosaccharides, e.g., sucrose, lactose.
- Polysaccharides: Complex carbohydrates like starch, glycogen, and cellulose.

Sample Questions and Answers:

- Phospholipids: Major component of cell membranes.

- Steroids: Cholesterol and hormones.

Sample Questions and Answers:

- What distinguishes saturated from unsaturated fatty acids?

Answer: Saturated fatty acids have no double bonds between carbon atoms, making them solid at room temperature; unsaturated fatty acids contain one or more double bonds, resulting in a bend and typically a liquid state.

- Explain the role of phospholipids in cell membranes.

Answer: Phospholipids form bilayers with hydrophilic heads facing outward and hydrophobic tails inward, creating a semi-permeable membrane that regulates substance movement.

- Why are lipids considered energy-dense molecules?

Answer: Lipids store more energy per gram than carbohydrates because of their long hydrocarbon chains, providing about 9 kcal/g.

Answer: Globular proteins are spherical, soluble, and often involved in metabolic functions (e.g., enzymes), whereas fibrous proteins are elongated, insoluble, providing structural support (e.g., collagen).

- What is denaturation, and how does it affect proteins?

Answer: Denaturation involves the unfolding of a protein's structure due to heat, pH changes, or chemicals, leading to loss of function.

4. Nucleic Acids

Nucleic acids store and transfer genetic information. They include DNA and RNA.

Key Topics:

- Nucleotide Structure: Composed of a sugar, phosphate group, and nitrogenous base.
- DNA vs. RNA: Differences in sugar (deoxyribose vs. ribose), structure, and function.
